

Appl. No. : 09/605,282
Filed : June 28, 2000

a switch connected to the electrical circuit, said switch responsive to movement of the wheel to thereby energize the light source.

7. (New) The light of claim 6, wherein an inner tube comprises the air valve stem. *NO BASIS*

8. (New) The light of claim 6, wherein the air valve stem has threads and the connector comprises complementary threads for connecting said light to the air valve stem. ✓

9. (New) The light of claim 6, wherein said power source comprises a battery. ✓

10. (New) The light of claim 6, wherein said light source comprises a light emitting diode.

11. (New) The light of claim 6, wherein said motion comprises a centrifugal force. ✓

12. (New) A motion activated light for a vehicle wheel having an air valve with a threaded stem, said light comprising:

a housing having threads complementary to the threaded stem for connecting said light to the air valve stem;

a power source connected to an electrical circuit;

a light emitting diode connected to the electrical circuit; and

a switch connected to close the electrical circuit responsive to movement of the wheel so as to energize the light emitting diode. ✓

13. (New) The light of claim 12, wherein an inner tube comprises the air valve stem. *NO BASIS*

14. (New) The light of claim 12, wherein said motion activated light comprises at least one color.

15. (New) The light of claim 12, wherein said housing comprises a substantially waterproof enclosure. *NO BASIS*

Appl. No. : 09/605,282
Filed : June 28, 2000

16. (New) The light of claim 12, wherein said housing further comprises an ornamental shape. *↗, no basis in Deutsch either*

17. (New) The light of claim 12, wherein said light emitting diode emits light of a predetermined color. *✓*

18. (New) The light of claim 12, wherein said motion sensitive switch intermittently closes said electrical circuit responsive to movement to thereby cause said light emitting diode to emit flashes of light. *✓*

19. (New) The light of claim 12, wherein said motion sensitive switch energizes said light source for a predetermined time following movement of the wheel. *↗*

20. (New) A lighted wheel for a vehicle, comprising:

a pneumatic tire comprising an air valve having a stem; and

a motion activated light connected to the air valve stem;

wherein the motion activated light comprises an electrical circuit having a power source, a light source, and a switch sensitive to motion of the wheel and connected to close the circuit to thereby energize the light source responsive to motion of the wheel.

21. (New) The lighted wheel of claim 20, wherein the motion activated light further comprises a housing having a connector complementary to the air valve stem.

22. (New) The lighted wheel of claim 20, wherein the motion activated light further comprises an ornamental shape. *↗*

23. (New) The lighted wheel of claim 20, wherein said power source comprises at least one battery. *✓*

24. (New) The lighted wheel of claim 20, wherein said light source comprises a light emitting diode. *—*

Appl. No. : 09/605,282
Filed : June 28, 2000

25. (New) The lighted wheel of claim 20, wherein said motion activated light comprises a color. ✓

26. (New) The lighted wheel of claim 20, wherein said motion sensitive switch intermittently energizes said light source responsive to motion to thereby cause said light source to emit flashes of light. ✓

27. (New) The lighted wheel of claim 20, wherein said motion sensitive switch energizes said light source for a predetermined time following movement of the wheel. ↗

28. (New) A method of lighting a vehicle wheel having an air valve stem, the method comprising:

At
cont.

connecting a light source to the air valve stem of the wheel, said light source activated by sufficient wheel motion; and emitting light by causing the wheel to move sufficiently to activate the light source.

29. (New) The method of claim 28, wherein the air valve stem comprises threads, the motion activated light comprises complementary threads, and connecting comprises screwing the motion activated light onto the air valve stem.

30. (New) The method of claim 28, wherein causing the wheel to move comprises driving a vehicle having the lighted wheel attached thereto.

31. (New) The method of claim 28, wherein emitting light comprises emitting light having a predetermined color.

32. (New) A method of forming a visually perceptible light image adjacent a rotating wheel on a moving vehicle, the wheel having an air valve stem, comprising:

Appl. No. : 09/605,282
Filed : June 28, 2000

connecting a light to the air valve stem of the wheel, the light capable of being activated by sufficient wheel rotation and comprising a predetermined shape for forming the light image; and

causing the vehicle to move so as to impart sufficient rotation to the wheel to activate the light source to emit light, thereby forming the visually perceptible light image.

33. (New) The method of claim 32, wherein the motion activated light comprises an electrical circuit having a power source, a light source, and a motion sensitive switch connected to close the circuit to thereby energize the light source responsive to motion of the wheel.

34. (New) The method of claim 32, wherein the wheel comprises an inner tube having the air valve stem.

35. (New) The method of claim 32, wherein the motion activated light comprises a light emitting diode.

36. (New) The method of claim 32, further comprising emitting light having a color.

REMARKS

Claims Pending

Applicant has replaced Claims 1-5 with new Claims 6-36. No new matter has been introduced as all claims are supported by the specification of the application and shown in the figures. Claims 6-36 are copied directly from Claims 1-3 and 5-32 of U.S. Pat. No. 6,467,939 issued to Deutsch et al. for the express purpose of provoking an interference pursuant to 37 C.F.R. § 1.607(a)

PROVOCATION OF INTERFERENCE PURSUANT TO 37 C.F.R. § 1.607(a)

Identification Of Patent

Applicant requests that an interference be declared between the present application and U.S. Pat. No. 6,467,939 issued to Deutsch et al.
